Product Description

You've never seen fish and underwater structure this clearly before. Lowrance's powerful LCX-104c is a serious big-screen fish finding/GPS mapping machine. With an immense 10.4" diagonal screen, no other sonar unit shows the resolution and detail of the 104. Using a 640 H x 480 V pixel display, with full VGA TFT, 256-color detail, this screen is viewable in all conditions, even with the summer sun directly overhead. Plus, cold-cathode back lighting make the screen colors just as visible during low light and after dark. The transom-mount 20° transducer gives you a wide picture of underwater condition. The FlashGraf™ function combines a scrolling sonar graph with a digital flasher with COLORLINE™. An adjustable ping speed automatically engages HyperScroll™ for locating fish targets at higher boat speeds. Advanced Signal Processing™ filters out clutter so your screen shows only sharp images, while Advanced Fish Symbol I.D.™ helps interpret sonar echoes and show them as fish symbols. The FishTrack™ function displays the depth of the fish echoes. You also can replay your sonar and GPS recordings, and create your own custom high-detailed maps, or add optional "plug & play" Navionics HotMaps™ Classic and Gold electronic charts on MMC memory card. It stores 1,000 waypoints, 1,000 event markers, and 100 routes with one touch zoom in-out. All your GPS and sonar settings are safely stored with the internal back-up memory. **Owner's manual not included. To download an owner's manual from Lowrance for this unit, please [click here](#).**
